Reagan National and Dulles Announce WiFi Availability

Wireless internet service is now available throughout both Washington airports

The Metropolitan Washington Airports Authority is pleased to announce the introduction of wireless internet service throughout the airport facilities.

Going online is quick and easy. Subscribers to major national wireless internet providers can easily reach the internet after clicking on their computer's internet browser icon. All others will see a WiFi introduction "splash" page which guides them through the login process and connection fees. The splash page also includes links to selected Airports Authority website pages available for viewing at no charge. Passengers may use this feature to check their flight status and obtain information about Reagan National and Washington Dulles Airports.

Cellular telephone and data coverage throughout National and Dulles has also improved. A new system in the public areas of the airport now supplements service that previously came from off-airport cellular towers.

The WiFi network was set up by a consortium of wireless telecommunications companies which are operating and maintaining the system and providing customer assistance. Connection fees will vary according to individual service providers.

Customers with questions about logging on may contact **1-866-849-2850**.

Information about WiFi internet service, including connection instructions, is also available on the Airports Authority website www.mwaa.com.
